

GEMINA NEWS

## **Gemina partners with roofing specialist Multicoper**

***The latest addition to the Gemina Partner Program comes amidst growing market demand for green building solutions, as new European legislation underscores the necessity of retrofitting existing commercial, industrial, and residential real estate to enhance its environmental sustainability and achieve climate neutrality by 2050.***

Milan, 20 March 2024 – Gemina, a leading general contractor spearheading the eco-smart living revolution, announces today that it has formalized a partnership agreement with specialist roofing solution provider Multicoper. The revised Energy Performance of Buildings Directive approved by the EU Parliament on 12 March 2024 propels the demand for green housing development and retrofitting initiatives. Gemina's collaboration with Multicoper is therefore a timely and proactive step towards meeting the needs of today's urban developers.

“Gemina’s decision to join forces with Multicoper reflects our commitment to staying ahead in the sustainable construction sector,” says Ettore Ghirlanda, Managing Director Industry Relations at Gemina. “By leveraging our new partner’s specialist know-how and extensive roofing solution competencies, we can effectively upgrade the energy efficiency of existing real estate while innovating eco-friendly housing solutions that align with the principles of smart living.”

“Over the last couple of years, not many players have weathered the uncertainty of being full-fledged pioneers implementing the latest national green building directives,” says Paolo Rossi, CEO of Multicoper. “Joining forces with Gemina, both our companies can continue to manage growth while pushing the boundaries in consultancy, project management, and construction for eco-smart living.”

Multicoper is a rapidly growing specialist player who achieved double-digit growth throughout the last five years. Born from the collective expertise of entrepreneurs in the roofing and energy sectors, the company offers a diverse range of services, including roofing construction, facade cladding, asbestos reclamation, and installation of fall protection systems.

As ideal go-to solution provider for state-of-the-art building retrofitting initiatives in both the public and private sectors, Gemina ensures efficient project management from analysis to implementation. Mastering a full range of interventions carried out directly or as a general contractor, the company works with specialist suppliers, utilities, and investment funds to provide turnkey packages, with services spanning from energy audits, to design and installation of insulation, doors, windows, roofing, heating and cooling systems, and photovoltaic solutions.
